

Can I bring Smart Luggage on my Flight?

Smart luggage—bags with built-in features like USB chargers, GPS tracking, or digital scales—often use lithium-ion batteries. For everyone's safety, Frontier has specific rules for traveling with these bags.

Smart bags are **not allowed** if:

- The battery cannot be removed
- The battery exceeds 100 watt-hours (Wh)
- The battery shows any signs of damage or defect

If you're bringing a smart bag with a removable battery:

- Remove the battery before boarding
- Pack it in your carry-on for the entire flight
- Protect the terminals from short circuits (e.g., cover them with tape or use the original packaging or a protective pouch)

At check-in, please let our team know the battery type and size so we can ensure safe handling.

For more details, visit the [FAA](#) or [TSA](#) websites for guidance on restricted items.
